

Investment objective & strategy

To achieve long-term capital growth through equity or equity related investments predominantly in the stock markets of India. The Fund will also invest in companies traded in other markets where a significant proportion of growth in their underlying business is set to derive from India.

The Fund offers access to the equity market of one of the largest and fastest-growing economies in the world. Our investment approach results in a concentrated and high conviction portfolio of stocks benefitting from the India growth opportunity. We are long term investors and focus on quality at a management, promoter and franchise level in companies offering valuations with a favourable risk-reward balance that exhibit superior compounding potential over time.

Commentary

- July proved to be a month of improvement in economic activity for most of the economies as lockdowns are being revoked. Amongst the global equities, emerging markets continued to outperform developed markets as concerns of muted demand, subdued spending and low employment creation weighed on developed markets. As all the major central banks now review their liquidity measures and policy rates, which have already touched their lower limits, pressure on central governments mounts for continued fiscal support to support the growth recovery. While the European Union agreed on a landmark fiscal stimulus, subsequent rounds of fiscal support from other major economies will be a scenario to watch. Nifty breached 11,000 levels for the first time since March this year, yielding ~7.8% returns in INR (and ~8.8% in USD) over the month.
- During the month, the Fund reported 7.5% return vs 10.3% for MSCI India Index. On a YTD basis, the Fund's performance was -10.4% vs -8.3% for the Index. Broadly, the Fund remains overweight on financials, healthcare, consumer discretionary, communication services and industrials compared to the MSCI India. Consumer staples and energy are the two main underweight sectors.
